

# Context Sensitive Help

From version 7.1 onwards you will be able to get help on any user interface element in two ways:

1. Press <F1> on your keyboard while the input focus is on the user interface element you are interested in. eg. If you wanted more information on the [Filter Bar](#), just click on one of the filter fields and then press <F1>.
2. Most dialogs will contain an Online Help button  in the lower left corner. Clicking this icon will navigate your browser to a wiki page which describes that specific dialog. Where a dialog does not have a help button you can still use <F1> to get help on the dialog.
